

Attorney Docket No. 122467.601

PATENT

SPECIFICATION:

Please replace the paragraph starting on page 1, line 28 and continuing onto page 2 up to and including line 11, with the following:

At present, a system is known where material from a Web page is shown on students' screens, and a text box is provided for the students to answer a multiple-choice question. An example can be found on the Web site of One Touch Systems Inc. <http://www.onetouch.com/welcome.html>. A system is also known where a text box is provided for entry of a multi-character word, sentence or paragraph response similar to a chat window. In the latter type of response, after a student completes a response, a "Submit" or "Enter" key must be executed, before the instructor is able to see the student's response - - it does not happen immediately. An example of this system is the eSchool system of ACTV Inc. ~~as can be seen on the Internet site, <http://actv.com/internet.html> under OnLine Learning.~~

Please replace the 2nd paragraph starting on page 16, line 23 and continuing through line 35, with the following:

If the teacher wants to see the actual Web site used by a student, ~~such as www.nasa.gov/archive/index.html used by Dan Martins~~ in column 104 in Fig. 7, the teacher double clicks on this URL and then clicks "Web Travel" button 20. This displays Fig. 8, with text box 120 filled in with this URL. The Web site can now be shown to the other students by actuating the "Travel" button 122 in Fig. 8. The URL is easily recognizable in column 107 in Fig. 7, because it starts at the beginning of a line. (The URL arrives in a packet from the student's computer. This is in contrast to the actual response, which usually arrives one character at a time depending on the speed of typing, the number of students and the speed of the system).
